

Resources

There are many different resources in the Saadiumm Empire. They range from the necessities to sustain life to needed materials for the service of starships. Here is a list of the most common materials in the Empire.

Dhujfi- This odourless gas is used in a wide range of applications, including specialised life support, starship maintenance, and glow-tubes. Dhujfi is mined on Karenos, in the Pjirku system. There are massive cities anchored in the clouds. These cities extract dhujfi and several other gases from the clouds. The largest city is called Kar-rowa which means "God of the Sky." Seen from the side it looks like just a collection of pipes and rectangles, but when one is on the city it is as complex as The City of Antiquity on Wuqhuy, the center of the Saadiumm Empire. Glow tubes use dhujfi to light up dark areas. So do gas-burners and heaters. In fact there is dhujfi in just about everything.

Kjha plasma- This substance is most commonly found in lasguns and plasma heaters. It is naturally a liquid metal. In lasguns it is heated in a special chamber and fed into small pipes surrounding the beam focuser. This enhances the lasgun and increases its range. In the plasma heaters it is used because of its ability to retain and disperse heat. Kjha plasma is the first of two sorts of plasma. The second sort is cybrear plasma. This is used in starship power cores and burners.
