The Srta Imperium is made up of many star systems. The main one is the Nom-orn system. It is unusual in that it has not one but two native species in it. It has 5 planets. The first one is Keris, home planet of the Keris-Ve. It is a harsh planet with daytime temperatures of up to 480° and night time -55°. The Keris-Ve live deep within the core of this planet in a maze of tunnels and huge artificial caverns. Surprisingly enough, there is natural water in Keris. The second planet is Mengah. Its average daytime temperature is 300°. At night it gets down to about 200°. Next is Srtaian. This is the home planet of the Srta, the founders of the Srta Imperium.
